Opportunity: North American Shale Plays

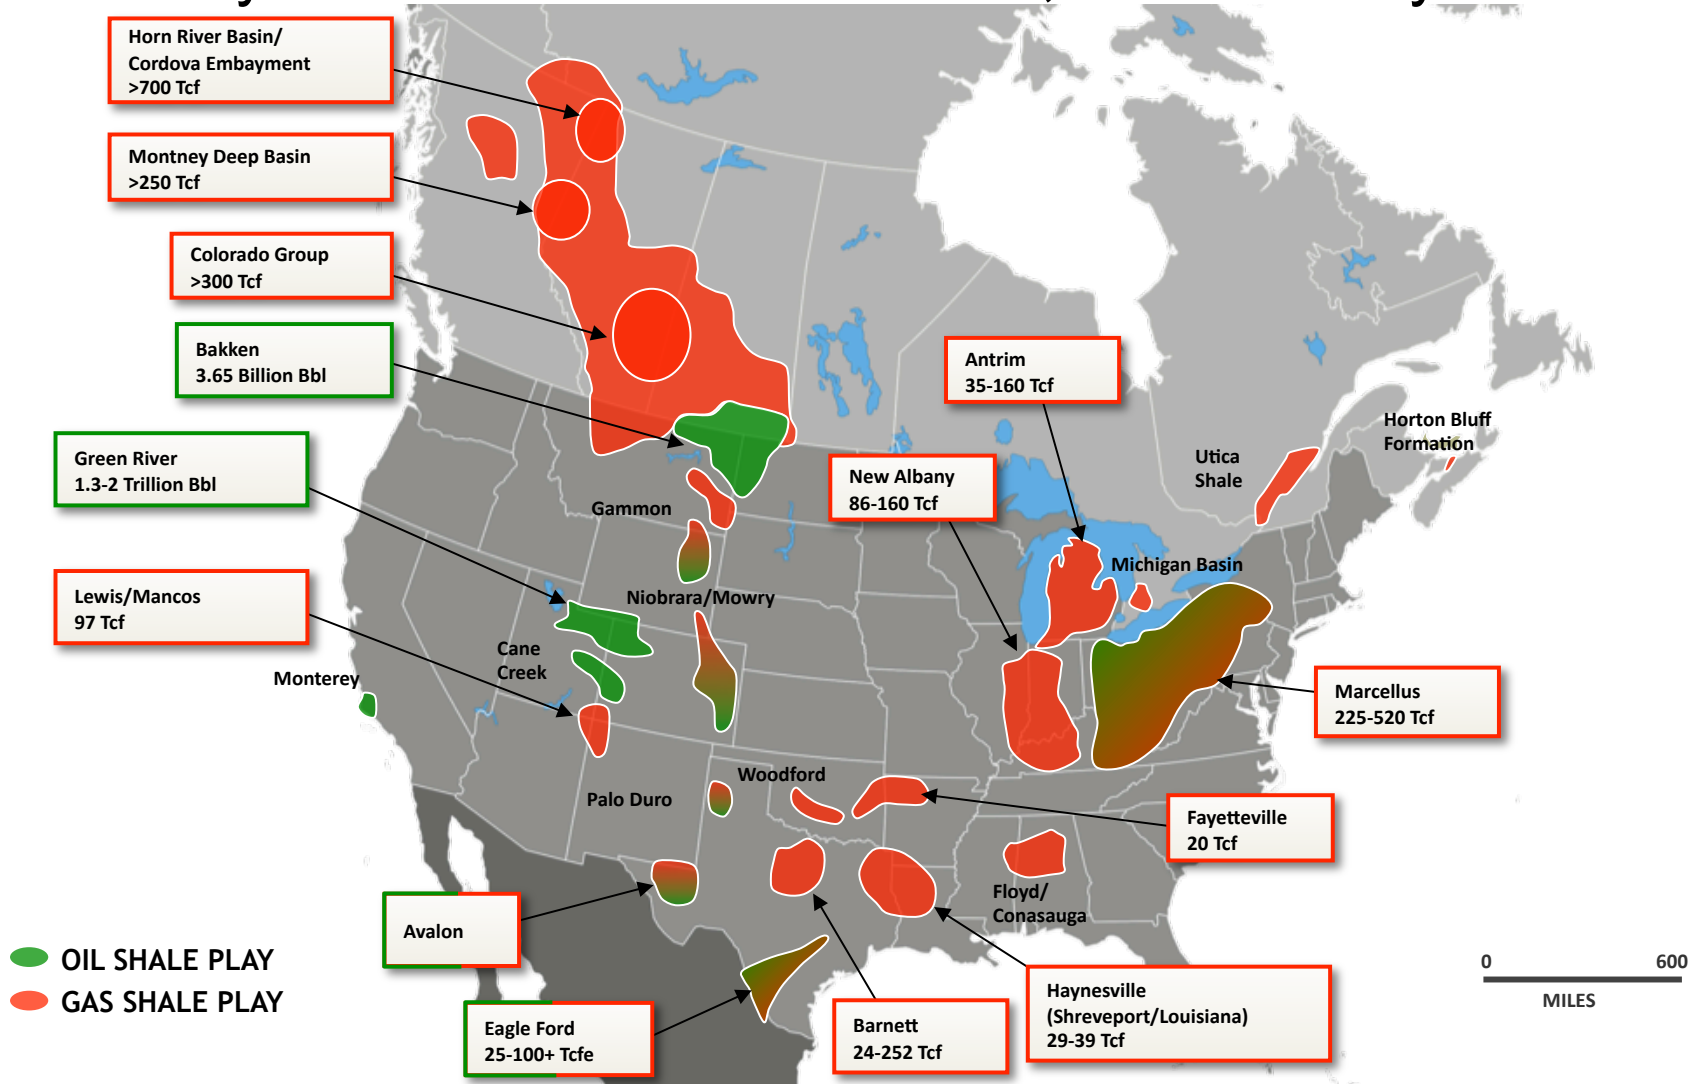

~2300 TCF (85% Shale Gas)

“100 years of Natural Gas” U.S. Consumption 23 TCF/y

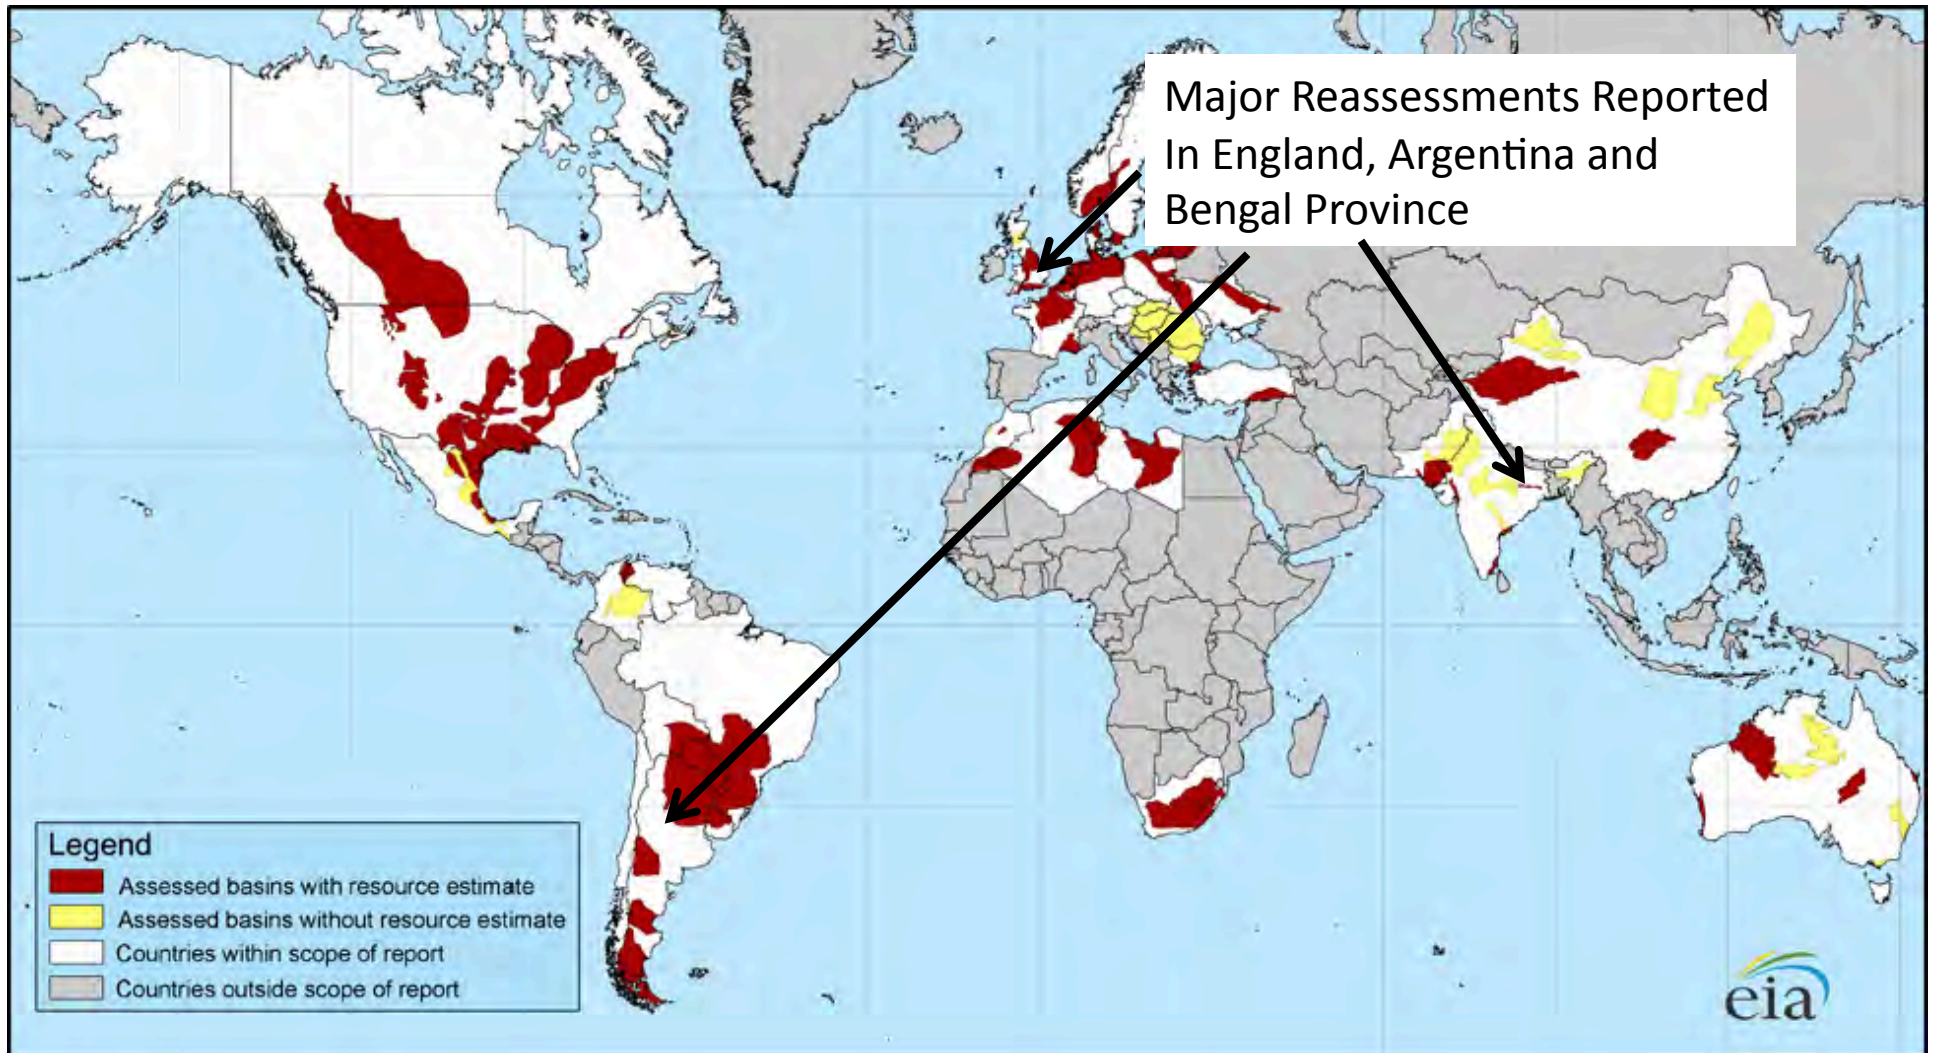

The Challenge of Natural Gas - Next ~10 Years

Many 10's of Thousands of Wells, ~1 Million Hydrofracs

- How Do We Optimize Resource Development?
- How Do we Minimize the Environmental Impact?

Global Shale Plays

~22,600 TCF of Recoverable Reserves

6600 TCF from Shale (40%)

Current use ~160 TCF/year (140 years)

Global Energy and Environment Challenge

How Do We Provide Accessible, Affordable, and Secure Energy While Protecting the Planet (2x by 2050, 3-4x by 2100)?

Air Pollution and Energy Source*

	CH ₄	Oil	Coal
CO ₂	117,000	164,000	208,000
CO	40	33	208
NO _x	92	448	457
SO ₂	0.6	1,122	2,591
Particulates	7.0	84	2,744
Formaldehyde	0.75	0.22	0.221
Mercury	0	0.007	0.016

Organic Shales - Deep Water, Anaerobic /Clay Matrix

Organic Rich Source Rock
Extremely Low Permeability

Drilling/Completion Technology Key To Exploitation of Shale Gas

Barnett Shale Production and Well Count (1993- 2009)

Horizontal Drilling and Multi-Stage
Slick-Water Hydraulic Fracturing
Induces Microearthquakes ($M \sim -1$ to $M \sim -3$)
To Create a Permeable Fracture Network

Upstream Challenges

Briefly....

- How do rock properties affect the success of stimulation?
- How does hydraulic fracturing really stimulate production?
- What factors affecting ultimate recovery?
- How do we minimize the environmental impact of shale gas development?

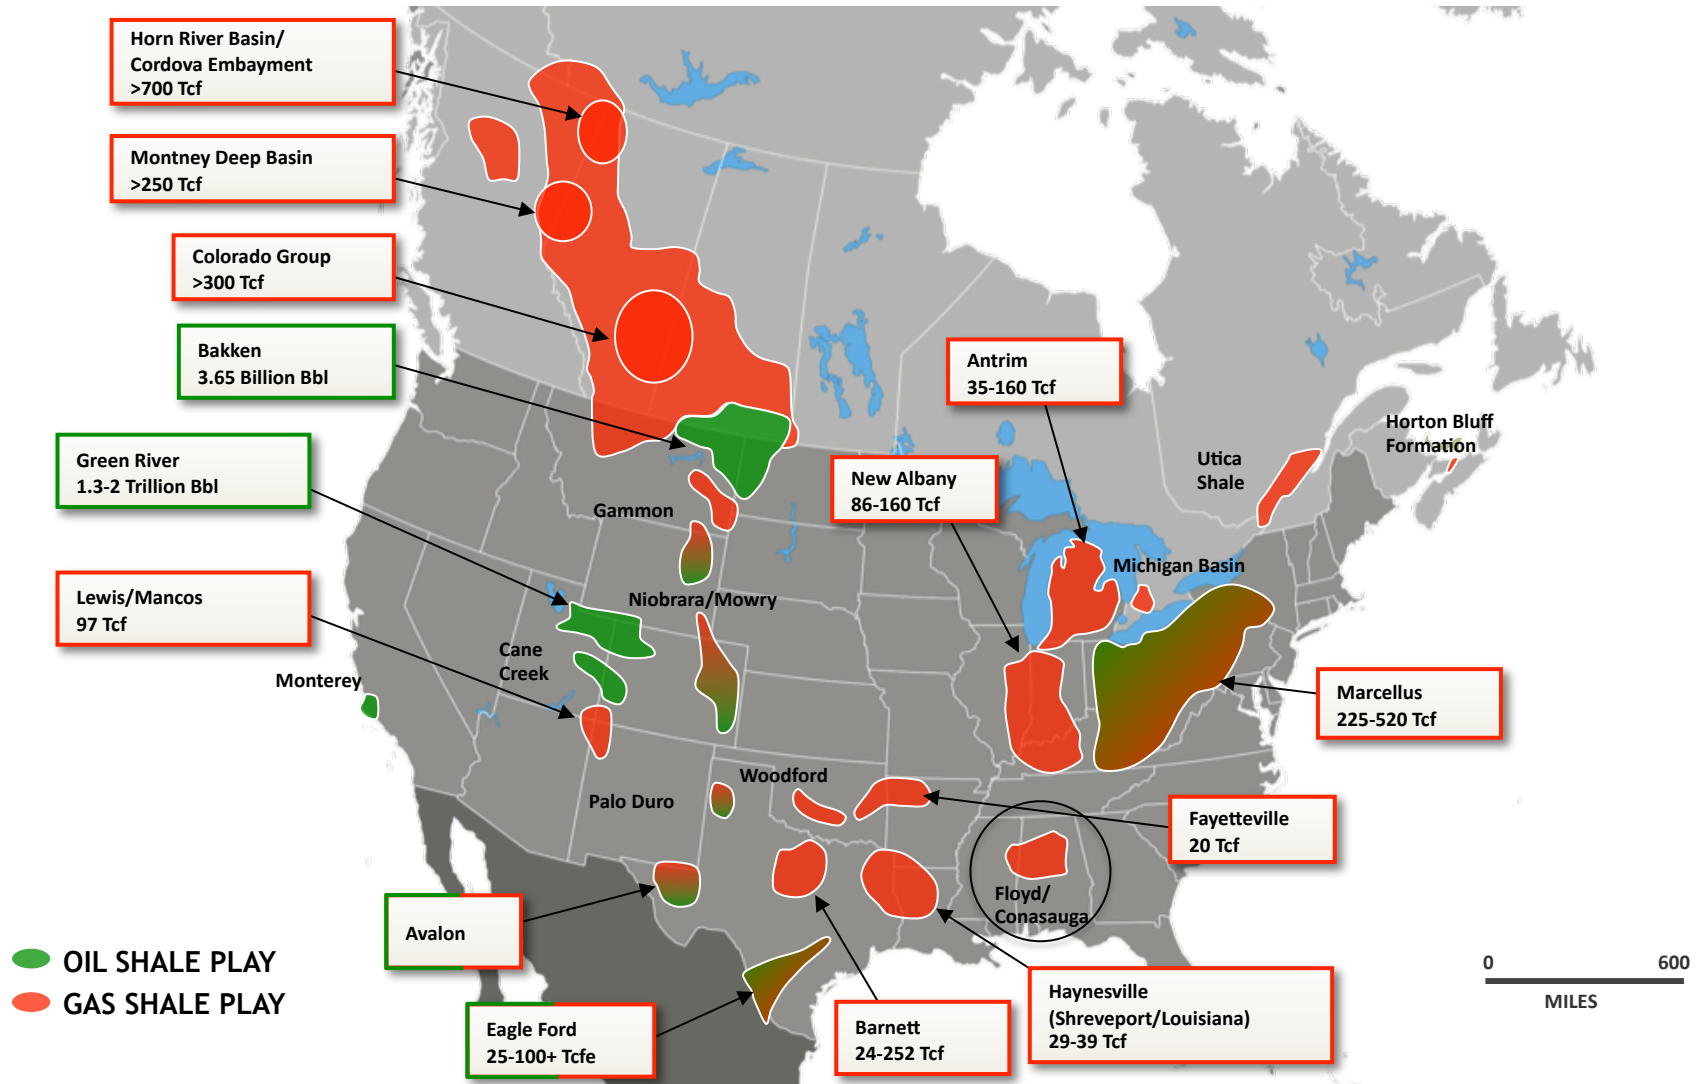

Physical and Chemical Properties of Organic Rich Shales

How Do the Properties of Shale Affect the Outcome of Hydraulic Fracturing Stimulation?

5 Wells, 40 Stages, ~4000 Microseismic Events

The Floyd Shale?

Organic Rich Shales are Viscoplastic

Sample group	Clay	Carbonate	QFP	TOC (wt%)
Barnett-dark	29-43	0-6	48-59	4.1-5.8
Barnett-light	2-7	37-81	16-53	0.4-1.3
Haynesville-dark	36-39	20-23	31-35	3.7-4.1
Haynesville-light	20-22	49-53	23-24	1.7-1.8
Fort St. John	32-39	3-5	54-60	1.6-2.2
Eagle Ford-dark	12-21	46-54	22-29	4.4-5.7
Eagle Ford-light	6-14	63-78	11-18	1.9-2.5

Is the Floyd Shale too Viscous to Stimulate?

Creep Strain

Stress Relaxation

Average Shale Properties

	BARNETT	MARCELLUS	EAGLE FORD	FLOYD
Depth (ft)	3 - 9,000	2 - 9,500	4 - 13,500	6 - 13,000
TOC (%)	1 - 10	1 - 15	2 - 7	1 - 7
RO (%)	0.7 - 2.3	0.5 - 4+	0.5 - 1.7	0.7 - 2+
Porosity (%)	2 - 14	2 - 15	6 - 14	1 - 12
Qtz + Calcite (%)	40 - 50	40 - 60	50 - 80	20 - 30
Clay (%)	20 - 40	30 - 50	15 - 35	45 - 65
Areal Extent (mi ²)	22,000	60,000	15,000	6,000
Resource Size (Tcf)	25 - 250	50 - 500	10 - 100	<<1

How many Floyd Shales are Out There?

Stimulation Challenge - ???

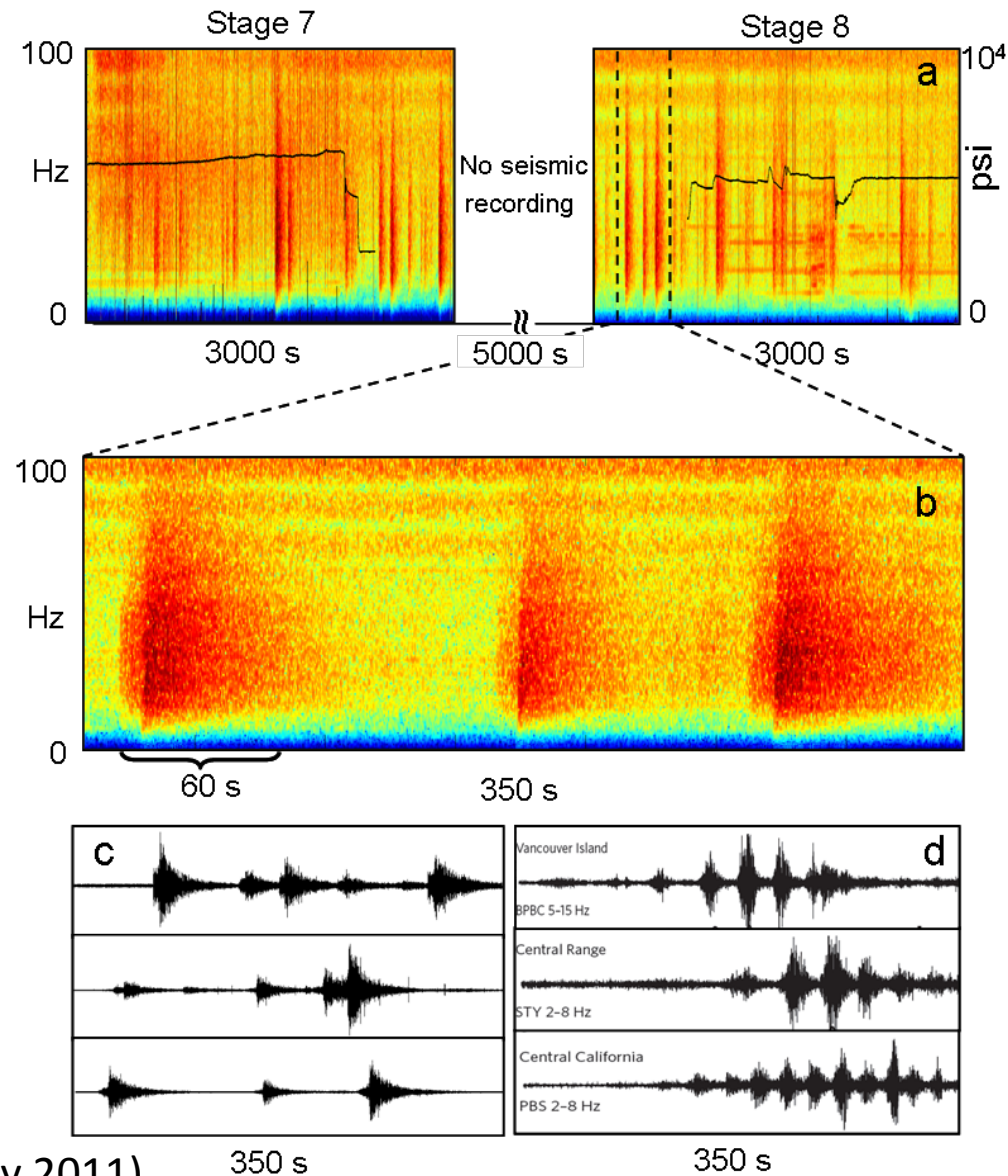

Volume Affected by
Microearthquakes Can
Account for Less Than
1% of Gas Production
in First 6 Months

5 Wells, 40 Stages, ~4000 Microseismic Events

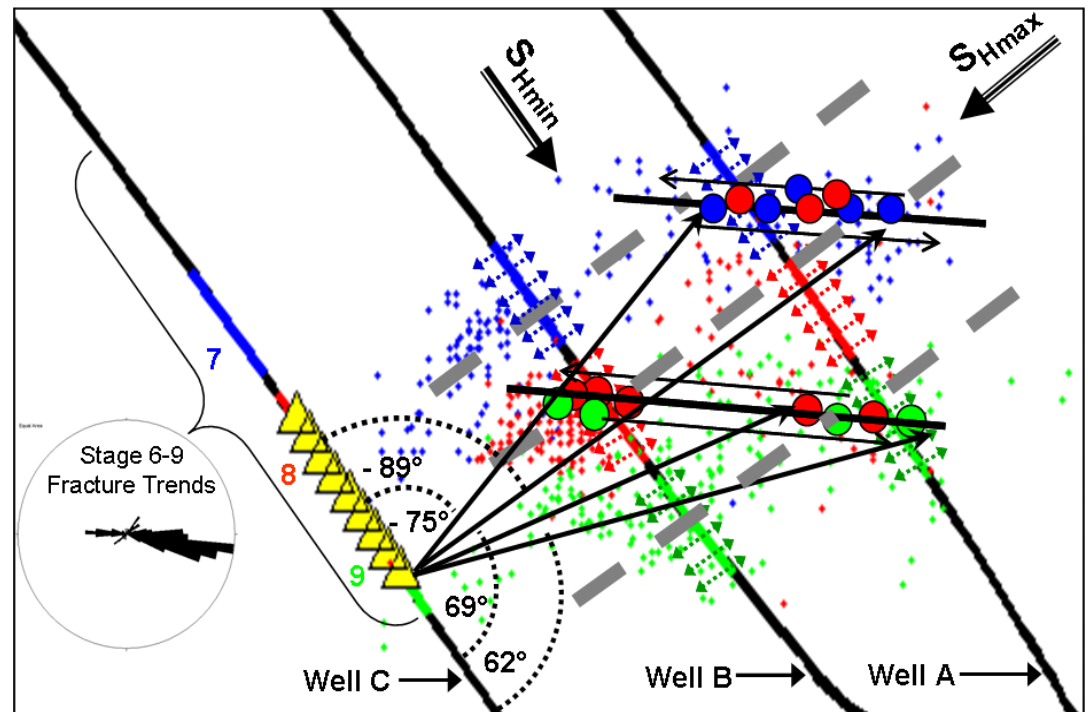

Long Period Long Duration Seismic Events

Das and Zoback,
The Leading Edge (July 2011)

Most Deformation Within the Reservoir During Hydraulic Fracturing is Aseismic

New DOE Committee

Secretary Chu Tasks Environmental, Industry and State Leaders to Recommend Best Practices for Safe, Responsible Development of America's Onshore Natural Gas Resources

President Obama directed Secretary Chu to convene this group as part of the President's "Blueprint for a Secure Energy Future"

"Setting the Bar for Safety and Responsibility: To provide recommendations from a range of independent experts, the Secretary of Energy, in consultation with the EPA Administrator and Secretary of Interior, should task the Secretary of Energy Advisory Board (SEAB) with establishing a subcommittee to examine fracking issues. The subcommittee will be supported by DOE, EPA and DOI, and its membership will extend beyond SEAB members to include leaders from industry, the environmental community, and states. The subcommittee will work to identify, within 90 days, any immediate steps that can be taken to improve the safety and environmental performance of fracking and to develop, within six months, consensus recommended advice to the agencies on practices for shale extraction to ensure the protection of public health and the environment."

90 Day Report Summary

- Shale gas is extremely important to the energy security of the United States
- Shale gas currently accounts for 30% of the total US natural gas production
- Shale gas development has a large positive economic impact on local communities and states
- Shale gas development creates jobs
- Shale gas can be developed in an environmentally responsible manner.

90 Day Report Summary

- Protection of water quality-1: The Subcommittee urges adoption of a systems disclosure of the flow and composition of water at every stage of the shale gas production process.

90 Day Report Summary

- Protection of water quality-2: Hydraulic Fracturing

Will Vertical Hydrofrac
Growth Affect
Water Supplies?

NO!
In nearly all active
shale gas plays

Depth of Affected Region Affected by Hydraulic Fracturing

Depth of Affected Region Affected by Hydraulic Fracturing

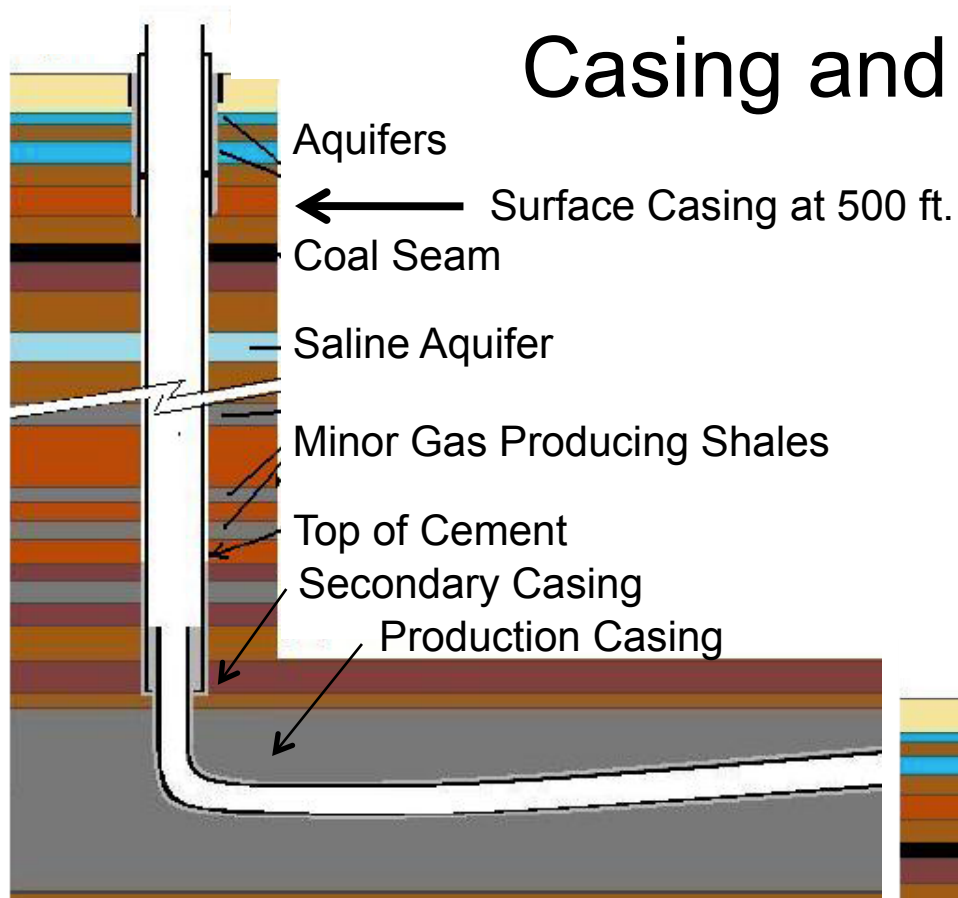

Fisher (2010) <http://nwis.waterdata.usgs.gov/nwis/inventory>

90 Day Report Summary

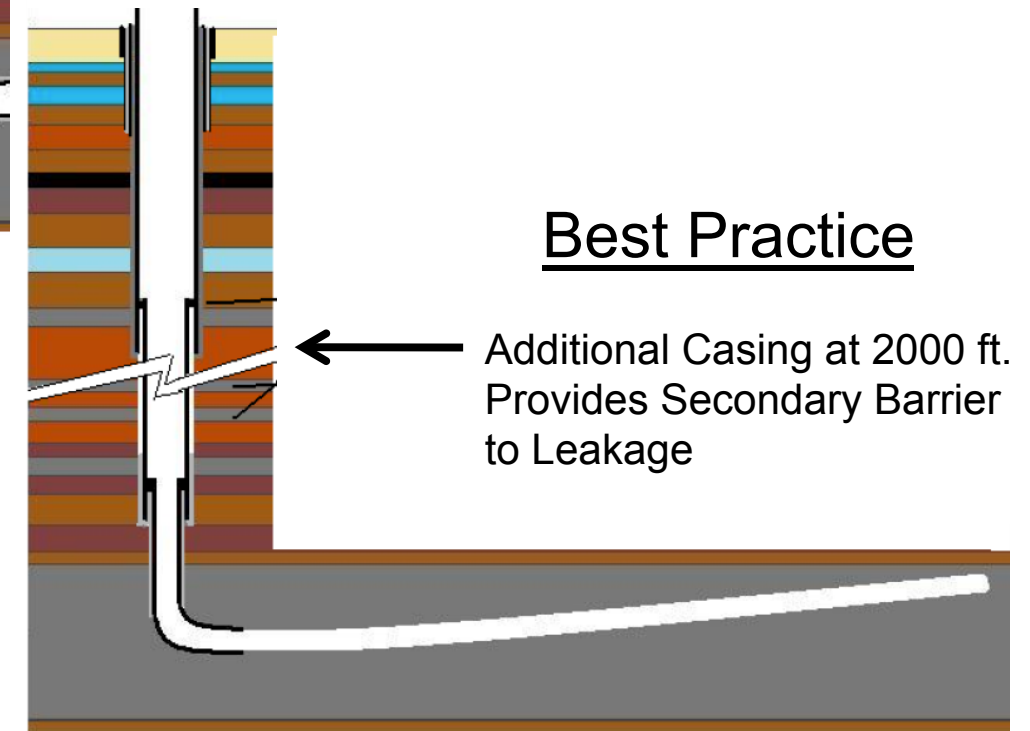

- Protection of water quality-3:
 - Adopt best practices in well development and construction, especially casing, cementing, and pressure management.

Casing and Cementing

90 Day Report Summary

- Protection of water quality-4:
 - Water use and water disposal issues are changing rapidly

Water Recycling – Western Pennsylvania

Utilization/Disposal of Saline Water

Figure 13. The Apache 34 pad in the Horn River Development of Northern British Columbia is a total of 6.3 acres where twelve multiple fractured horizontal wells recover gas from approximately 5000 acres.

Courtesy George King, Apache Corp.

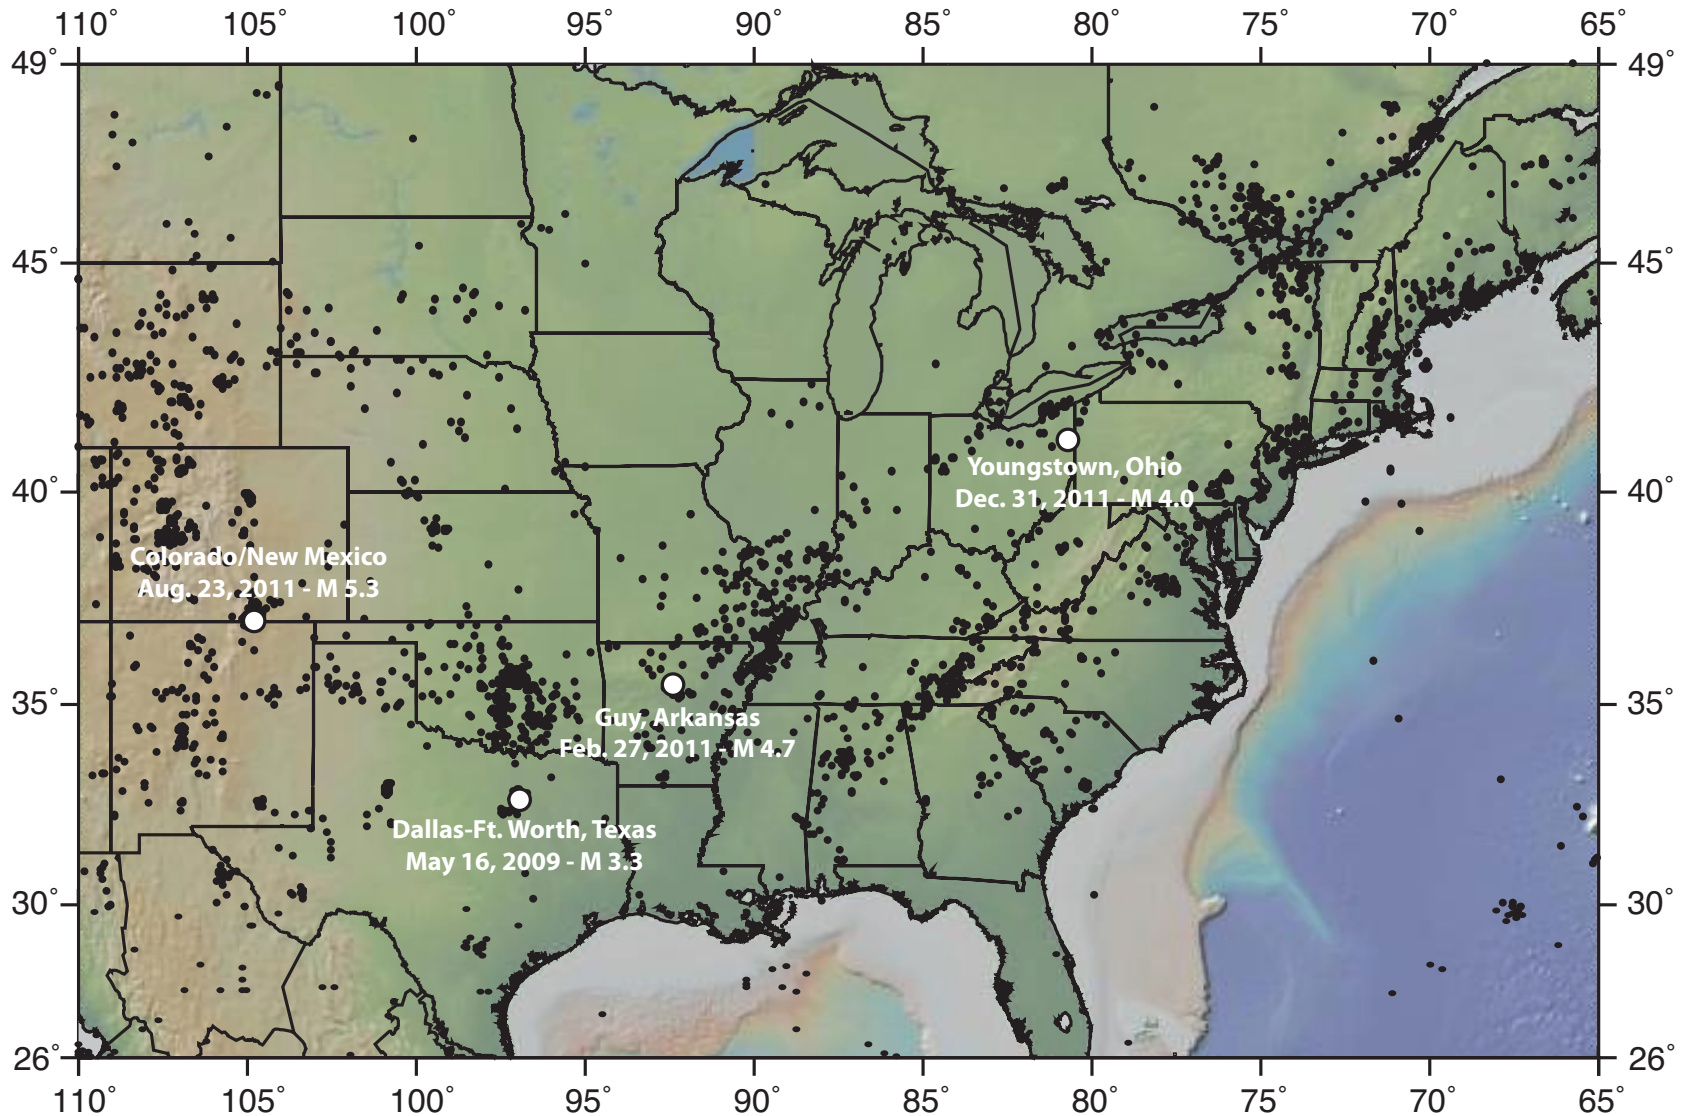

90 Day Report Summary

- Managing cumulative impacts on communities, land use, wildlife, and ecologies.
- Organizing for best practice: The Subcommittee recommends the creation of a shale gas industry production organization dedicated to continuous improvement of best practice

Earthquakes Triggered by Fluid Injection

Triggered Earthquakes Guy, Arkansas

Managing Triggered Seismicity

- Avoid Injection into Potentially Active Faults,
- Limit Injection Rates (Pressure) Increases,
- Monitor Seismicity (When Appropriate)
- Be Prepared to Abandon Some Injection Wells
